What is NODES?

The Cooperative Studies Program (CSP) Network of Dedicated Enrollment Sites (NODES) is a consortium of VA Health Care Systems that have facility-based teams dedicated to conducting CSP studies with enhanced overall performance, execution and compliance.

These teams are collaborative, experienced and knowledgeable in all aspects of efficient management and conduct of CSP multi-site research.

Built upon six primary ELEMENTS, NODES shares facility-derived best practices and provides local insights on METHODS & TOOLS to CSP partners throughout the lifecycle of a CSP trial.

While not every VA has a NODES, this consortium is available to provide guidance and "Boots-on-the-Ground" expertise to any site participating in a CSP trial.

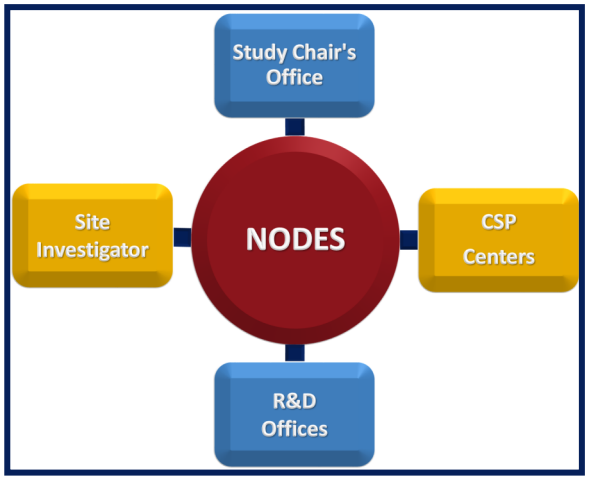
NODES ELEMENTS

CSP Collaboration

NODES works with key stakeholders throughout the lifecycle of a study.



Study Design and Planning

NODES provides recommendations from the site perspective.

Site Initiation

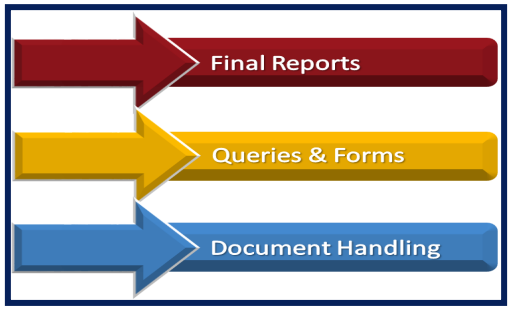
NODES helps identify ways to reduce logistical and staffing barriers.

Active Study Phase

NODES provides guidance to CSP study teams to achieve site success.

Study Close-Out

NODES provides direction on local site facilitation of closing our a study.



Community Networking

NODES strives to build a stronger clinical research environment.

NODES Methods & Tools

Aiming to support the execution, logistics, efficiency, management, experience, network, teamwork and standards of VA Clinical Trials.
